

Physics, Blocks and Parkour: Escape from the Fall

A thermodynamic survival adventure.

I CAN'T BELIEVE IT, GUYS! WE'VE FALLEN TO THE BOTTOM OF A CRACK IN LAYER -50; A RIVER OF LAVA IS BLOCKING OUR PATH, AND THE EXIT IS 100 BLOCKS UP.

RUBIUS, YOU'RE THE ONLY ONE WITH A PICKAXE! HOW ARE YOU DOING? HURRY UP. IT'S SO HOT, I CAN'T STAND IT, AND ON TOP OF THAT, I FEEL THIS PRESSURE CRUSHING MY HEAD, AND I DON'T UNDERSTAND WHY...!

ATMOSPHERIC
PRESSURE

EXTREME TEMPERATURE:
DIRECT RADIATION FROM
THE LAVA.

ATMOSPHERIC PRESSURE:
THE WEIGHT OF THE ENTIRE
COLUMN OF AIR FROM
LAYER 256 (TOP OF THE
ATMOSPHERE)

DON'T WORRY, BUDDY.
THAT SENSATION IS
ATMOSPHERIC
PRESSURE. THE
DEEPER YOU GO, THE
HIGHER THE
PRESSURE!

EXTREME
TEMPERATURE

RADIACIÓN

WHOA, MAN! MY
PICKAXE HAS
BROKEN.
WE'RE TOTALLY
STUCK!

RUBIUS, WHAT DO YOU HAVE THAT WILL HELP US GET ACROSS?

UM... 64 BLOCKS OF ICE THAT I STOLE FROM A VILLAGER?

THAT WORKS OUT PERFECTLY FOR ME!

Heat transfers energy to the particles of solid water. THE FUSION OCCURS, AND IT TURNS INTO A LIQUID!

Pure thermodynamics! Water absorbs heat and turns into a gas through vaporization. The lava cools rapidly as it transfers its energy to the water, and the lava turns into a solid through solidification. That's how we craft an obsidian bridge!

FUSSSSSH!

¡¡COF, COF! MAN, THAT SMOKE WAS THICK! I COULDN'T SEE A THING. I SWEAR, I THOUGHT I WAS GOING TO FALL INTO THE LAVA AND LOSE MY WHOLE INVENTORY!!

IBAI LOOKS TOWARD
THE DISTANT SUNLIGHT
ON THE CEILING OF
THE CAVE, BUT THE
EXIT IS 100 BLOCKS UP.

WHAT DO WE DO
NOW, GENIUS?

VEGETTA: I SAW EARLIER THAT
RUBIUS HAD SOME LEATHER
STACKS IN HIS INVENTORY.

LET'S BUILD A FLYING
MACHINE FROM SCRATCH.
WE'RE GOING TO BUILD A
HOT-AIR BALLOON!

DO YOU WANT TO
BUILD A MACHINE
THAT FLIES THROUGH
THE AIR!?
